

Caveat Emptor !

(Let the buyer beware)

There are those programs that offer basic Desktop Publishing features such as: importation of black and white pictures, limited or non-existent rotating, few attributes, just a handful of fonts, text flow around boxes, supports a select number of printers, spell checking is done the hard way, and a fixed number of basic ST graphic and text importing, not to mention a high price tag.

And then there is...

PageStream

DETERMINED TO BE THE BEST !

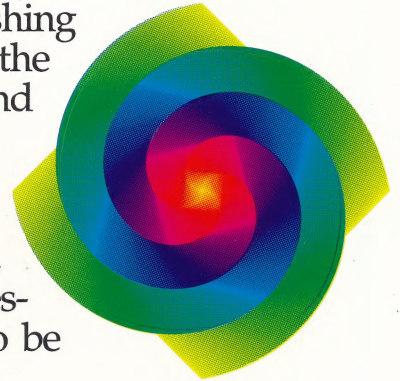

This entire brochure was created and color separated using PageStream running on a MEGA ST4 and proofed on an Apple LaserWriter II NTX PostScript compatible laser printer and the final separations were output to a VariTyper 4300. The 24-Bit Color IFF King Tut Picture was scanned using a Sharp JX-450, courtesy of ASDG.

DIVERSITY

Color and placement of text is very important in a publishing package. PageStream adds DIVERSITY above and beyond the **ordinary** publishing package. The need to be creative and professional is essential in bringing your ideas to paper.

PageStream is Diverse! Mishaps do happen. PageStream allows errors to be easily corrected. Text editing, Search and Replace text and of course the essential spell checker helps those mishaps to be edited quickly.

Rotation
Rotation
Rotation

PageStream is Powerful! Features such as the ability to search and replace attributes, text tagging for consistent layout, batch kerning and hyphenation for a smooth flow of text and more, add to the integral part of desktop publishing.

PageStream allows you to make a statement!

You can choose a variety of fonts that Soft-Logik (and others) offer. Display fonts for strong statements and body type to make those long passages readable or script fonts to add the perfect touch to an invitation. The diverse selection of fonts make it easy to convey your thoughts and ideas clearly.

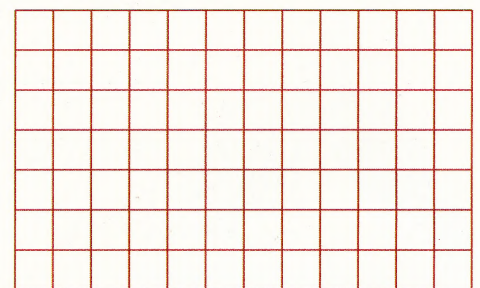

Kerning

Hyphen-
ation

PageStream Versatility! Supports PostScript and UltraScript not to mention other PostScript compatible clones. Plus the endless number of printers that PageStream supports that give the professional quality output that is demanded.

Importing text and graphics are also essential to the layout. With PageStream this is a simple task! No need to translate or convert those graphic or text files. PageStream directly supports many of the popular programs found on the Atari ST, Commodore Amiga, Apple Macintosh, and IBM PC.

Duplication

Who needs ordinary when you can have DIVERSITY? PageStream is determined to be the best!
